

Characteristics:

General Description:

The single and dual channel DIN Rail Switch/Proximity Detector Interface, D1034S and D1034D is a high integrity repeater designed to interface contacts or proximity detectors located in Hazardous Area, maintaining a high level of loop integrity (safety integrity level SIL 3 according to IEC61508).

Field loop integrity and status (line plus contact or proximitor) are continuously and directly monitored, in transparent mode, into the PLC, ESD, DCS using their existing input line, without requiring an additional channel for failure detection.

This solution results in 100 % input channel saving with evident space, cost and failure risk benefits.

Function:

1 or 2 totally independent and isolated channels I.S. for voltage free contact or EN60947-5-6 proximity switches. Provides 3 port isolation (input/output/supply).

Signalling LED:

Power supply indication (green).

EMC:

Fully compliant with CE marking applicable requirements.
